MAXIMUM CIRCUIT VALUE

Grid-No.1-Circuit Resistance	Rg1(ckt)	
For grid-No.1-resistor-bias operation.	-	1 MΩ

^a With grid No.3 and grid No.2 connected, respectively, to cathode and plate at socket.

^b This value can be measured by a method involving a recurrent waveform such that the Maximum Ratings of the tube will not be exceeded.

^c This rating is applicable where the duration of the voltage pulse does not exceed 15% of one horizontal scanning cycle. In a 525-line, 30-frame system, 15% of one horizontal scanning cycle is 10 μs.

^d Measured with a dc meter.

^e Adequate circuit precautions must be taken to protect the tube in the absence of grid-No.1 bias.

^f Plate dissipations up to 24 W maximum are permissible for short periods of time (up to 10 s maximum) provided the maximum envelope-temperature rating is not exceeded.
